

# TLK 110 AND WAVE PTX FALL ALERT FEATURE

The TLK 110 and WAVE PTX Fall Alert/Man Down feature provide organizations with another method to enhance workplace safety, particularly for employees working alone. With the Fall Alert feature activated, the TLK 110 can identify when a worker has fallen or stopped moving. When one of these conditions is detected, the WAVE PTX mobile application will automatically initiate an emergency call to the assigned group or individual to let them know the worker needs help.

## **AUTOMATIC**

Users with Fall Alert on their TLK 110 do not have to do anything to initiate an emergency call when they have fallen or otherwise been injured.

## **DEPENDABLE**

The Fall Alert Pre-alarm Duration and Fall Alert Tone prompt users to bring the TLK 110 back to a normal position to avoid generating a false alarm.

## **CONFIGURABLE**

Fall Alert can be set up to meet the needs of each user's role, with configurable parameters that include angle, movement, pre-alarm and alarm durations.

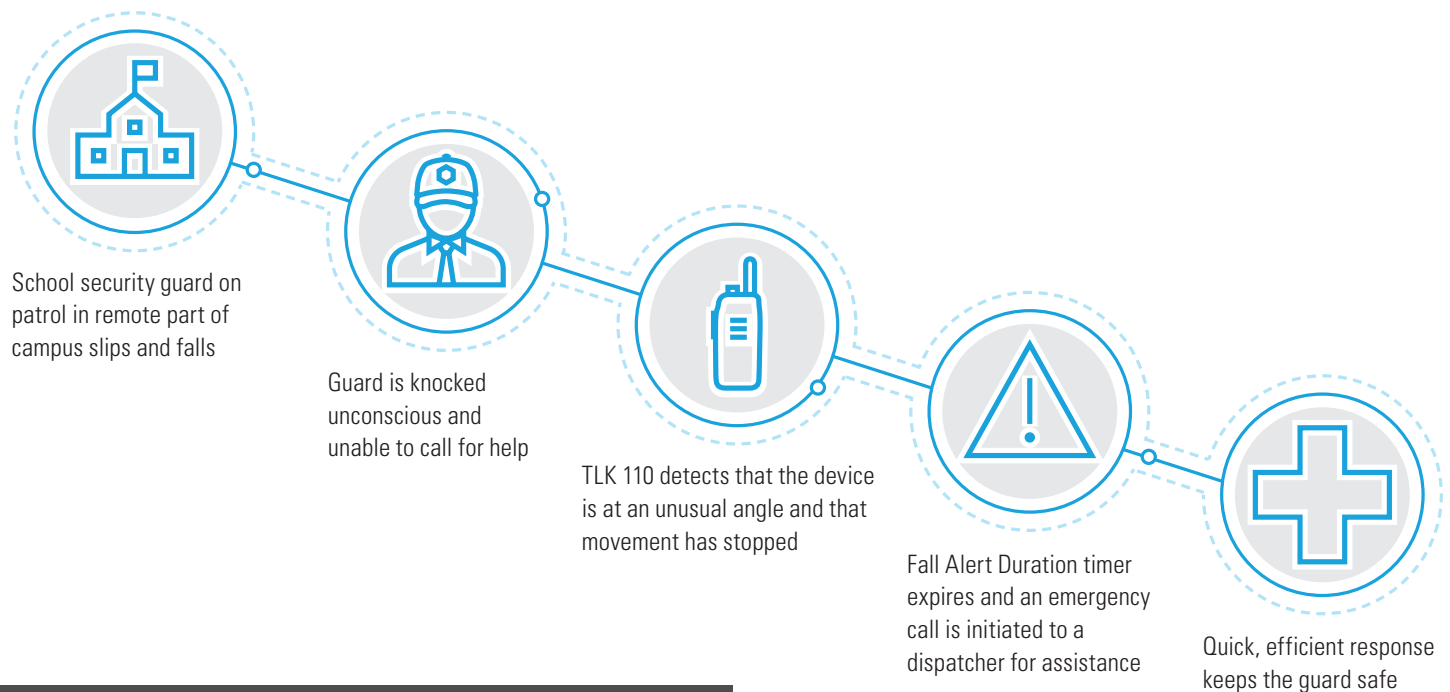

## **COMFORTING**

Lone workers in potentially hazardous conditions are assured that help will be alerted if they fall or are otherwise injured.

When the Fall Alert feature is enabled, the TLK 110 device uses an accelerometer to determine if the device has been placed at an 'unusual' angle, or if movement has ceased. The TLK 110 will emit a pre-warning tone to prompt the user to bring the device back to a normal position and, should the angle not be corrected, the TLK 110 and WAVE PTX application will automatically place an emergency call.

## USE CASE – SECURITY GUARD

With the TLK 110 and Fall Alert feature, no worker is truly alone; if something happens to them, dispatchers, supervisors and others are quickly alerted to their need for help.
